Kim Lien Ward, Hanoi City | Date of Birth: 27/01/2004 | Female

Summary

Business Analyst & Tester with a Bachelor of Information Systems (Thuy Loi University) and nearly one year of experience in Business Analysis, QA/QC and Project Management on AI and data products; completed VinUniversity's AI in Action program (Batch 3). Strong at working with stakeholders: listening, clarifying needs and turning them into concrete requirements. A solid ML/AI grounding helps me bridge business and engineering teams. Aiming to grow into a specialist BA building AI products that deliver real value.

Education

Thuy Loi University (TLU) **2022 – 2026**
Major in Information Systems Graduated

VinUniversity **Jul – Nov 2026**
AI in Action - Batch 3 Completed

Core Competencies

- **Requirements Elicitation & Analysis:** Gathered business requirements through stakeholder interviews and user surveys, analyzed them, and translated them into specification documents for the technical team; tracked requirement changes throughout the project.
- **Business Documentation:** Wrote BRDs, PRDs, user stories, personas, and use cases; defined functional scope and acceptance criteria.
- **Stakeholder Management:** Acted as the point of contact between Business, Data/Technical, and Compliance teams, ensuring information was communicated accurately to all parties.
- **Change & Impact Analysis:** Assessed the impact on scope, data, and compliance when business requirements changed.
- **Risk, Issue & Dependency Tracking:** Maintained risk/issue/dependency logs and weekly progress reports for cross-functional AI projects.
- **Testing & UAT Support:** Designed test cases from business specifications and wrote pytest tests to verify actual results against agreed requirements.
- **Agile Collaboration:** Worked with Dev/Product teams in iterative cycles with continuous requirement exchange and feedback.

Experience

Project Manager Intern **Sep – Nov 2026**
GSM – VinSmart Future Hanoi

- Managed a personalization and recommendation project (Recsys) across a cross-functional DL&AI team covering Food, Intent/Service Ranking, and Ride Destination recommendation.
- Built the project plan and tracked risks, issues, and dependencies; produced weekly progress reports for the project lead.
- Supported requirement scoping for the Home-screen food recommendation phase, including the plan to A/B test merchant recommendations.
- Wrote the PRD/BRD for an internal AI product (details confidential); ran user surveys to identify pain points and also served as tester.

Business Analyst & Tester **Dec 2025 – Jul 2026**
International Cyber Security (ICS) Hanoi

- Elicited and documented business requirements from three stakeholder groups (Business, Data/Technical, Compliance), translating them into technical specifications and reducing rework caused by misinterpreted requirements.
- Maintained requirements traceability across hand-offs, proactively flagging deviations between agreed specifications and the technical team's actual implementation progress.
- Identified and assessed compliance risk during Data Warehouse/Data Platform development by defining data classification and control requirements from the early project stages.
- Contributed to business analysis, design review, and testing across multiple parallel projects (HRM system, Vyin Chatbot, Ward-level Dashboard), ensuring delivered functionality matched business requirements.

- **Tester:** Designed test cases from business specifications and acceptance criteria, covering positive, negative and edge cases, and executed functional testing and UAT support before hand-off to stakeholders.
- **API testing:** Tested REST APIs with Postman, building request collections and validating status codes, response bodies, authentication and error handling against the agreed specifications.
- Logged and tracked defects with steps to reproduce, severity and expected vs. actual results; ran retests and regression checks after fixes together with the developers.

Projects

Internal AI Project (Confidential) **Sep – Oct 2026**

Role: Business Analyst & Quality Control

- Elicited business requirements and developed a comprehensive PRD/BRD, defining the product roadmap, use cases, acceptance criteria and core feature specifications.
- **QC:** Ran a 100-case regression suite across 5 categories, raising the pass rate from 51% to 87%; expanded it to 132 cases with 100% pass on guardrail tests (15/15).
- Improved retrieval quality over 40+ evaluation runs: Recall@1 from 79.2% to 97.5% and MRR@10 from 0.86 to 0.98; answer correctness reached 88.7% with zero fabricated values.
- Details: thanhloan27.github.io/projects/internal-ai

IncidentLens **Jul – Aug 2026**

Role: Business Analyst & Quality Assurance

- **BA:** Authored the BRD (root-cause problem statement, 4 stakeholder groups, scope in/out, NFRs, 5 pain-point metrics mapped to in-scope features) and user stories for 4 personas; validated the problem on 50–80 NHTSA SGO incident narratives. Reported MVP results honestly, including failed criteria (taxonomy accuracy 21.7% vs. 17.4% majority baseline), and flagged the missing manual-time baseline as the top remaining risk.
- **QA:** Wrote a 7-case prioritized test plan (technical, functional, UX, compliance) and grew the suite from 475 to 758 tests (coverage 70% → 74%), validating test strength via fault injection and re-introduced historical bugs; added fuzz tests across 26 API endpoints (156 tests) and prompt-contract tests (21 tests, 0 LLM tokens; 38/38 taxonomy definitions present, no label leakage across 92 clips).
- Logged 32 defects (F1–F32) with severity, owner and status; found the root cause that had silently skipped all CI tests for 7 days (broken Ruff config blocking Pytest), fixed it, and got CI green for the first time (lint errors 190 → 4).
- Details: thanhloan27.github.io/projects/incidentlens

Human Resource Management System – ICS HRM (Capstone Project) **Apr – Jun 2026**

Role: Business Analyst & End-to-End Developer

- Interviewed ICS stakeholders to define business needs and translated them into requirements for an HR system covering employee records, attendance, payroll, KPI, leave, and department management.
- Designed a relational database schema of 25 tables to support core HR workflows and ensure data consistency across interconnected modules.
- Built a working full-stack demo (FastAPI/SQLAlchemy, React/Vite) and validated its functionality against the documented requirements.
- Details: thanhloan27.github.io/projects/ics-hrm

Automated HRM Data Query Chatbot **Jan – Jun 2026**

Role: Requirements Definition & Backend Implementation

- Defined the chatbot's core use cases and query scope so employees can retrieve HRM data through natural-language questions, while keeping queries within a non-sensitive data boundary.
- Built the backend with FastAPI and Uvicorn, integrating Groq LLM via LangChain to generate SQL queries and retrieve data from the HRM database through an internal API.
- Details: thanhloan27.github.io/projects/hrm-chatbot

Skills

- **Business Analysis:** Requirements elicitation, BRD/PRD, user stories, personas, use cases, specification writing, requirements traceability, impact analysis, UAT/test case design
- **Project Coordination:** Project planning, weekly reporting, risk/issue/dependency tracking, Agile/Scrum fundamentals, stakeholder management
- **Data & Technical:** SQL, Python, Git, relational database design, REST API basics (FastAPI), Postman (API testing), pytest
- **Data Systems:** ETL/ELT (Apache Airflow), Big Data (Apache Spark, MapReduce)
